TREATMENT WITHIN THE COMMUNITY: CLIENT RESIDENCE
AND THE GEOGRAPHICAL LOCATION OF THE TREATMENT FACILITY*

One of the primary goals of Mental Health Services has been to provide treatment near the client's residence. To measure progress toward this goal we can compare the location of the client's residence and the location of the facility at which he is treated.

The information in this report is based upon the population of clients discharged from local Short-Doyle facilities during the period 7/73-12/73.** As this was prior to implementation of the regionalization of the Department of Health Services, these data can serve as a base for comparing post-regionalization progress toward the goal of treatment close to the client's home.

In Table 1 are shown, by treatment modality, the number of discharges residing in each Health District who were served at facilities located within the Health District of residence. There is considerable variability among Health Districts in the proportion of clients served in their Health District of residence. For example, over 80% of the clients residing in the Santa Monica-West Health District were treated at facilities in Santa Monica-West, while none of the Pomona clients were treated within their Health District of residence by the County of Los Angeles Mental Health Services, since the Tri-City Mental Health Authority serves residents of the Pomona Health District cities of LaVerne, Claremont, and Pomona and there are no County facilities in that Health District.

Table 2 shows, for clients residing in each Health District, the proportions of discharges from facilities located within the Mental Health Region of residence. Of the rehabilitation clients, 43.61% were treated within their Mental Health Region of residence, and 37.35% of the inpatients and 52.07% of the outpatients received services within their Mental Health Region.

Although Health Services Regions were mainly on paper in the first half of FY 1974, breakdowns of discharges by Health Services Region of residence and treatment location are shown in Table 3 for future comparisons. The percentage of clients treated within the boundaries of their Health Services Region of residence ranged from 27.75% for the Southeast Region to 82.73% for the San Fernando/Antelope Valley Region.

*Clyde Kobayashi, Nanci McGuire, and Carlos Hernandez did extensive hand calculations to produce the tables presented in this report.

**State hospital data are not included in this report.

Of the 36,714 discharges for whom a Health District of residence was known (85% of all discharges) 37.35% obtained treatment at a facility within their Health District of residence, 49.82% within their Mental Health Region of residence, and 68.48% within the Health Services Region of their residence.

Of course many factors enter into the determination of the relative distance from home to treatment facility for clients living in different locations. The availability of public transportation is just one of the variables not considered in this report. The size of the Health District of residence also varies considerably. For reference, in Table 4 the areas of each Health District are shown, as well as the proportion of clients living in the Health District who are treated in facilities within that Health District. By comparing the areas of the Health Districts with the proportions of clients served within the Health District of residence, we can get a better idea of the distance between home and treatment. Knowing that the Southeast Health District is only 8.8 square miles in area is important in interpreting the fact that only 4.29% of the clients residing in Southeast are treated there. In contrast, of the clients residing in Monrovia, with 478.4 square miles, 18.35% are treated in that Health District. In general, however, the larger Health Districts have the greatest percentage of discharges treated within the Health District of residence.

Appended to this report are tables showing in greater detail the breakdowns of Health District of residence by location of treatment facility. For clients residing in each Health District, there is a table showing the number of discharges from facilities located in each of the 25 Health Districts.

The Evaluation and Research Division produces semi-annual reports showing Health Districts of residence of clients discharged from each reporting unit during the preceding six-month period. The data for each reporting unit are mailed to the unit, along with data on other characteristics of their discharges (age, sex, problem area, etc.), and copies are accessible in the Division offices for others who require the data.
